

Diving Equipment
COMPANY

..."QUALITY DIVERS USE QUALITY EQUIPMENT" ...

I was born and growing up at The Baltic sea known for its cold water and beautiful well-preserved wrecks. Diving on them was difficult, beautiful and demanding. With time, wreck diving became my biggest life passion. Then, creating the equipment which makes diving easier, more pleasant and safe became my passion. And the biggest reward for me is the satisfaction of my friends - divers.

Tomasz Stachura
CEO Santi

PROVIDES AN EASY FULL RANGE OF MOVEMENT

Over the 25+ years of my diving experiences, I have had the opportunity to dive a lot of different drysuits. I am most impressed with my new Santi ESpace drysuit. I am very pleased with the new innovative and extremely durable fabric and reduced seams design. This fabric allows for a very streamlined cut and still provides an easy full range of movement. I am looking forward to many years of good service from this suit.

ESPACE

- total weight: 4 kg
- fabric: Nylon/Butylen/Poliester 420 gr/sqm
- colors: black, black/red, black/blue
- telescoping torso
- front zip covered with a flap
- Apeks valves with "inflator" ending
- two pockets on thighs
- neck seal made of insulated latex or 3 mm neoprene
- HD bottleshape wrist seals
- 6 mm Neoprene boots
- suspenders
- 6 mm Neoprene hood
- medium pressure hose
- bag
- 3 year guarantee

NEW E.LITE DRYSUIT

Dry Suit E.Lite is made of a unique Rip Stop Nylon/Butylen/Polyester material, with a weight of 450 gr/sqm. Rip-stop nylon is a light-weight nylon fabric with inter-woven ripstop reinforcement threads in a crosshatch pattern. This fabric gives very similar durable condition than Cordura and extra modern appearance.

AN OUTSTANDING PRODUCT FOR SERIOUS DIVING AND EXPLORATION

The Elite Drysuit, is by far the highest quality drysuit I ever had in my hands. The combination of material, craftsmanship and quality make it an outstanding product for serious diving and exploration. It is visible that years of experience and knowledge - from Your side as a manufacturer as well as from active divers around the world to whom You seem to listen very carefully - went into the design of that suit!

E.LITE

- total weight: 4,2 kg
- fabric: Rip Stop Nylon/Butylen/Poliester 450gr/sqm
- colors: black/black
- telescoping torso
- front zip covered by an additional zip-fastened flap
- High-profile Apeks valves and inlet valves with "inflator" ending
- two utilities pockets with elastic bungee loops; the right pocket has a zip-fastened flap with a small pocket for double ender clip
- Kevlar knee pads placed on thin neoprene
- neck seals made of insulated latex and 3 mm neoprene
- HD bottleshape wrist seals
- Flex Sole boots
- suspenders
- 6 mm Neoprene collar hood
- medium pressure hose
- E.Lite bag
- 3 year guarantee

ENDURO

- complete weight 5,2 kg
- materials: Cordura/Butylen/Poliester 600gr/sqm
- colors: black/black, black/red, black/gray
- flat seams
- telescoping torso
- front entry zipper
- Apeks valves
- two pockets on thighs
- neck seal made of latex insulated by 2 mm neoprene
- HD bottleshape wrist seals
- boots Neoprene 6mm
- suspenders
- neoprene hood - 6 mm thick
- medium pressure hose
- bag
- 3 year guarantee

BUNDER

- total weight: 3,8 kg
- fabric: Poliester/Butylen/Poliester
- colors: black
- telescoping torso
- back zip covered with a flap
- SiTech valves with "inflator" ending
- two pockets on thighs, the right made for small inflation bottle
- attached hood For Fullface Mask
- HD bottleshape wrist seals
- 6 mm Neoprene boots
- suspenders
- medium pressure hose
- bag
- 3 year guarantee
- no Santi branding

EXTREMELY WARM SUIT

*(...) So far I like:
The warmth. Extremely warm suit.
And the warmth and material has lasted very well The quality and finish of the suit.
The cut. Great flexibility in the suit.
Not very bulky for the warmth provided. Quite streamline. The inside zipper flap that protects the skin. The neck collar is great. Bottom legs elastic bands as well!*

■ Extreme BZ 400

We used the best materials and technologies available to produce this Undersuit.

Thinsulate™ BZ 400 insulation is recommended by 3M as optimal thermal protection for diver undersuits; is pre-compressed to eliminate bulk under Dry Suits, as opposed to other materials.

It also has a net layer, which make the undersuit even more durable and practically indestructible. The lining is made of soft micropolar 190 gr.

The outside layer is made of 6.6 Polyamide 100% additionally reinforced with polyester fabric in the areas exposed to damage. In this model we used also good solutions from other versions, like elastic gussets in arms and waist, wide ankle bands and water-resistant cuffs with tapes, which supply air to the dry gloves.

■ Comfort BZ 200

The insulating layer in this COMFORT 200 UNDERSUIT is made of high class compressed Thinsulate™ 200 type. This type of insulation absorbs less than 1% of moisture in relation to its weight, so even in damp conditions, Thinsulate™ retains its insulating ability. This breathable material guarantees the thermal balance in a body of diver.

The outside layer is made of 6.6 100% Polyamide - light weight, but extremely durable and breathable fabric. Smooth and slippery outer shell provides help with getting into your Dry Suit.

The inner lining is made from "Micropolar" 190 g/m2. The Comfort 200 under suit is good for cold water - with suitable underwear it can be used for long dives in extremely difficult conditions.

AN UNDERGARMENT THAT FITS LIKE A GLOVE

Divers make a significant investment in a custom dry suit, but it is just as important to get an undergarment that fits like a glove, allowing for maximal range of motion, comfort and warmth. My Santi drysuit underwear gives a long-legged girl a chance to move in comfort and full range. I have nothing but great things to say about Santi and their service, attention to detail and great fit!

Jill Heinerth

www.IntoThePlanet.com

■ Basic CDS 150

Undersuit Thinsulate™ CDS 150 is the most versatile of all SANTI undersuits. The outside layer is made of 6.6 100% Polyamide - durable and breathable fabric. For this model we use Thinsulate™ CDS 150, insulation, and the lining can be made of polar 400 gr/m², or - if you wish - warm and fleecy fabric. It also has gussets in armpits, which provide exceptional mobility.

■ Light CDS 40

This is the thinner Undersuit we produce. We used here the thinnest insulation available on the market - Thinsulate™ CDS 40, breathable fabric, which instantly pull sweat away from your body. The outer layer is made of 6.6 Polyamide 100% fabric quilted along together with Thinsulate™. The inner layer is made of micropolar 190 g/m².

■ SUMMER

Summer Undersuit is made of 100% polyester fleece 400 g/m², finished with polyester patches to reinforce parts exposed to damage and water. This is an ideal undersuit for warm months. Also used by sailors as the underwear with a jacket.

□ Warming Vest

We are using three different quality of fabric to make this vest: micropolar, Thinsulate BZ 200/Thinsulate BZ 400 and 6.6. 100% Polyamide as the outer shell material.

Warming Vest can be worn under Santi undersuits and/or over thermal underwear Ex-Temp for even greater protection from the elements. We produce this versatile undergarment in two weights, with Thinsulate™ 400 for additional thermal protection and extremely cold waters, and Thinsulate™ 200 which can be used with light drysuits in moderate to warm waters.
